

SHIPXPLORE
render to interact

COMPLEX, REAL TIME,
FAST INTERACTION WITH
YOUR VESSEL

Powered by

 **GLO MARINE**
smart engineering solutions

WHAT DOES IT DO?

ShipXplore is an innovative rendering service that puts you in control of your ship model. It gives you the ability to interact with the vessel, in real time, through our game-like interface.

perform
close-up
inspections

change
material type
and color

hide different
structures/
elements

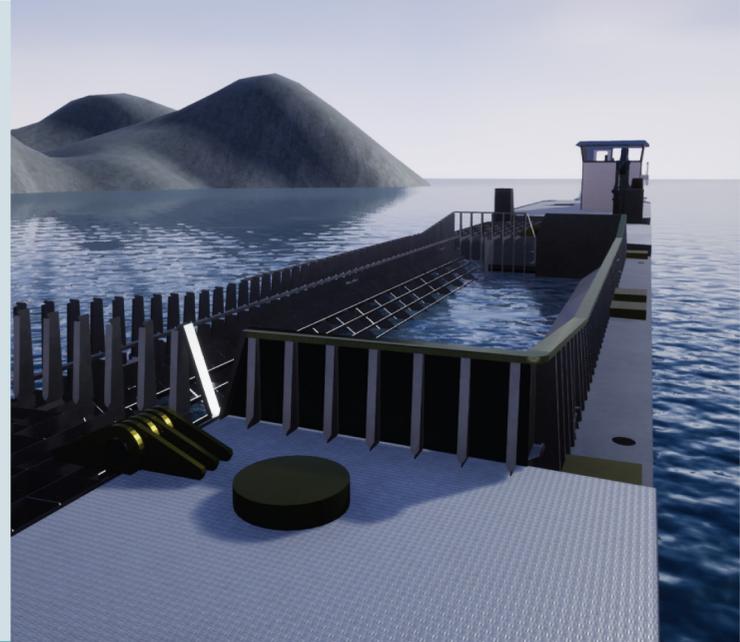

simulate
operations

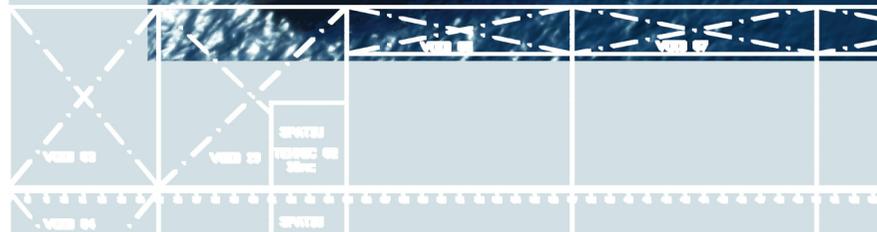

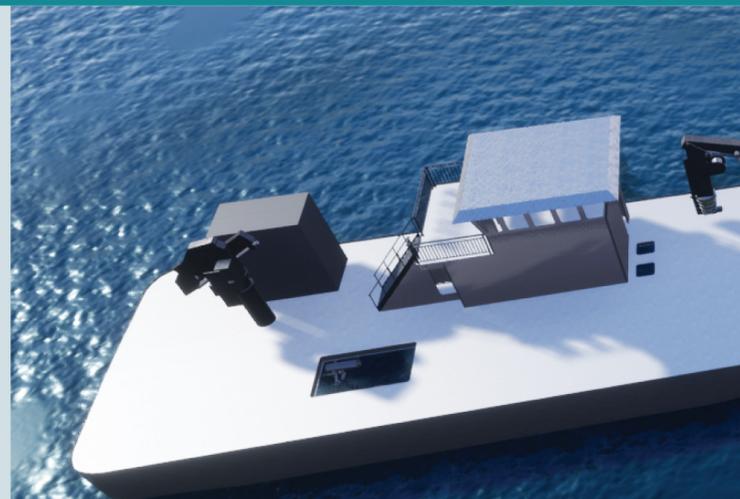

OUR CLIENTS

engineering companies
shipyards
owners and operators

maritime
oil & gas
subsea operations

The even better part is that we can do all these faster and cheaper than the traditional rendering methods.

BENEFITS

real time
customization

ultra-fast
rendering &
delivery

game-like
model
interaction

affordable
pricing

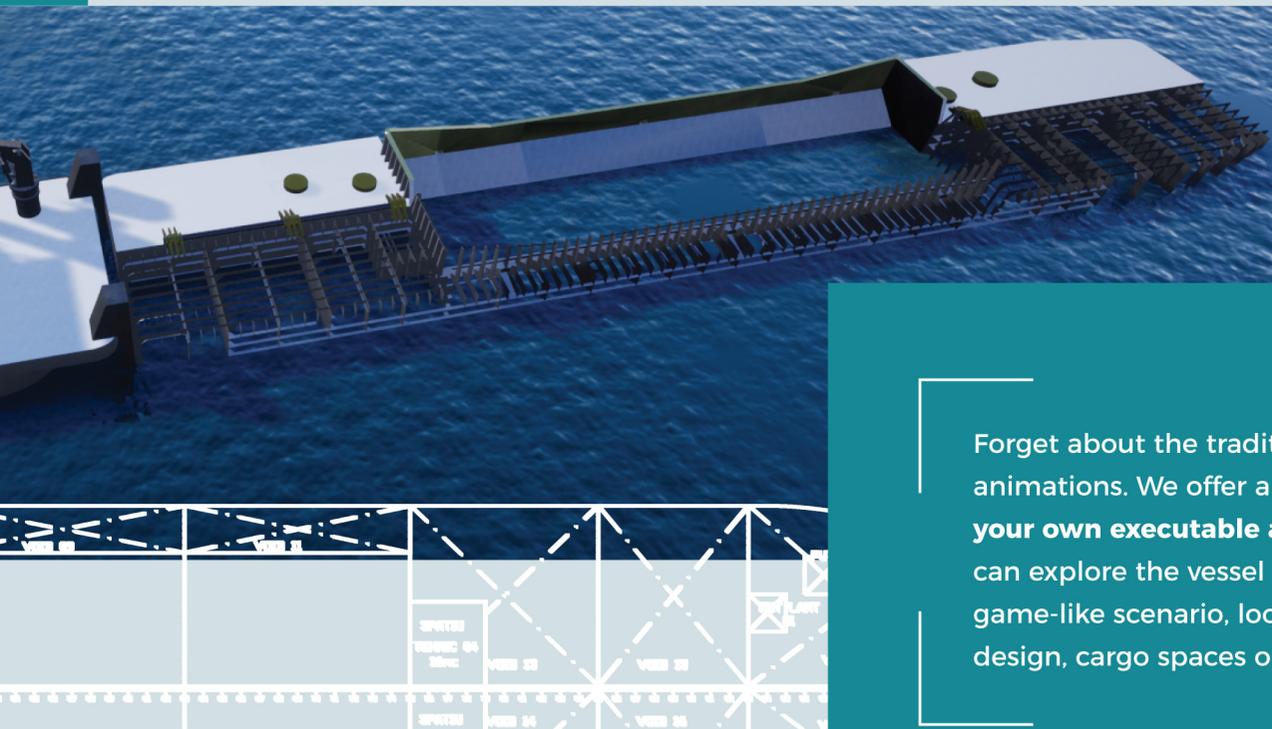

APPLICABILITY

3D model – concept / delivery stage walk-through
and vessel inspection simulations:

- ship-to-ship operations
- on-board systems functionality
- subsea and offshore operations

WHAT WE NEED

- 3D Model of vessel in CAD format (alternatively this can be generated by us – additional time and costs implied)
- full description of the operation or functionalities needed
- level of detail (adjustable rendering quality depending on time frame and needs)

Forget about the traditional photos and animations. We offer all that and additionally **your own executable application** where you can explore the vessel from end to end in a game-like scenario, looking at the interior design, cargo spaces or framing system.
